

## **NEW OZONE PROCESS ERADICATES MOLD, BACTERIA, VIRUSES AND ODORS CleanZone Systems opens office in Pennsylvania**

June 20, 2006 -- CleanZone Systems, LLC of Lisle, Illinois, announces an expansion of its air purification program with the opening of a new office in suburban Philadelphia. CleanZone, which uses new patent-pending high-performance ozone generators to safely and effectively eliminate mold, bacteria, viruses and unpleasant odors, has recently opened other offices in New York, Georgia, Texas and California, and expects to add offices in other states as the year progresses.

The heightened awareness of the dangers inherent in mold is being felt in many ways across the country.

- More and more home buyers are seeking assurances that their new home is mold-free and demanding mold testing as part of the inspection process.
- Parents across the country are concerned about mold and other unhealthy spores in their schools.
- The mysterious "sick building syndrome" has been linked to mold, bacteria and inadequate ventilation.
- Building owners and managers are being asked to prove that their premises are free from mold and airborne bacteria.
- Insurance firms are requiring mold inspections before providing coverage.

The CleanZone generators use ultraviolet light to manufacture highly-concentrated levels of natural ozone which kills toxic molds, viruses, bacteria, fungus, allergens and other micro-organisms, as well as insects. The high doses of ozone, which has been called "oxygen with an attitude," also eliminate unpleasant odors caused by pets or smoke. The CleanZone system is environmentally friendly, uses no chemicals or solvents, leaves no residue and is guaranteed to be 100% effective.

The presence of mold in homes, schools, restaurants, hotels, hospitals and other facilities is recognized by governmental agencies and environmental experts as a contributing factor to asthma, allergies and other respiratory disorders as a result of the allergens, irritants and potentially toxic substances it produces.

"This new technology uses the natural purification properties of ozone, which has been utilized in water purification and food processing for years, to address one of the crucial environmental issues we are facing," said Bob Wegbreit, CleanZone's regional sales director for Pennsylvania. "The process completely eradicates the mold in a matter of hours compared to weeks using traditional methods and at a fraction of the cost."

### **About CleanZone Systems**

CleanZone Systems LLC is a Lisle, Illinois-based licensor and distributor of high-output ozone generators that eliminate mold, bacteria, viruses and other micro-organisms as well as odors from homes, schools, hotels, hospitals, restaurants, food processing plants, warehouses and other facilities.
